The Green OAT

Impact reporting

Adrien Zakhartchouk
Head of the Climate, Environment and Agriculture Unit
Directorate General of the Treasury
Ministry of Economy and Finance
France has issued a sovereign green bond, the “Green OAT”

- First issuance in January 2017; Outstanding amount: €19bn.
- Compliant with Green Bonds Principles and CBI Framework.

France provides three reports to investors:

- an annual report on allocation
  This report is providing information on the allocation of spending eligible to the Green OAT.
- an annual report on output indicators
  This report provides information on the performance of spending related to the Green OAT, and is not focused only on environmental aspects as some expenditures may be addressing other objectives as well.
- a report on environmental impact, at an appropriate frequency.
  This report is supervised by the Green OAT Evaluation Council
The Council is in charge of evaluating the environmental impact of green eligible expenditures.

It is a commitment to transparency and independence:

- Its members are nine international experts of green finance and policy evaluation, including its chair, Manuel Pulgar Vidal, WWF Global Climate and Energy Practice Leader.
- Impact evaluation studies are reviewed by independent referees.
- The Council is constantly providing feedback and reviewing all documents, from the definition of terms of reference of the evaluation until its final release.
- Council’s opinions are public and underline both strengths and weaknesses of evaluation studies.

The first impact evaluation study was released in November 2018. It covers a tax credit for energy renovation in buildings.

The second impact evaluation study will be released before the end of 2019 and will cover a public subsidy to waterway transport.
Example: the Tax Credit for Energy Transition

Choice of the expenditure by the Council
• The Tax Credit for Energy is an income tax credit on housing energy efficiency expenditures and on some renewable energy investments.

Terms of Reference
• defined by the Council with the support of the Secretariat.
• Choice of the Referees

Impact assessment
• conducted by the Commissariat General for Sustainable Development.

Intermediary report
• Report by the referees
• Presentation to the Council
• Review and comments.

Final version
• Presented to the Council
• A draft opinion is circulated

Publication of the opinion
• All documents (ToR, study) are published on the website
The Tax Credit for Energy Transition (Crédit d’impôt pour la transition énergétique – CITE) is an income tax credit on housing energy efficiency expenditures and on some renewable energy investments.

The CITE represents one third of the green eligible expenditures funded by the proceeds from the initial issuance and the tap issues of the Green OAT in 2017 (3.2 billion euros).

Main findings of the impact evaluation study are:

- The CITE triggered around 75 000 additional renovations per year in 2015 and 2016.
- The CITE triggered an additional amount of 1.7 billion euros of energy efficiency investments per year in 2015 and 2016.
- The cumulative gain of CO2 emissions over 2015-2050 triggered by additional 2015 and 2016 investments corresponds to 7% of the 2015 level of CO2 emissions of the housing sector.
